

Fact sheet

design plus: edit text in InDesign files via any web browser – without InDesign

How much do you spend on Adobe InDesign licences? Do you need reviewers to proofread text in InDesign but without “breaking” the formatting?

design plus allows reviewers to safely edit the text of INDD and IDML files without needing InDesign.

How does design plus work?

This ground-breaking tool allows users to edit text in any InDesign file using just a web browser – even on a mobile device or tablet such as an iPad. The styles, images, layers and masters in the file are protected: they cannot be accidentally modified or moved, so changes made to the text cannot result in incorrect layouts and extra work for the document’s designer.

Once the file is uploaded into the design plus library, the reviewer – who can be automatically notified of a review task by e-mail – can simply click on any text in the pixel-perfect preview to edit it.

Choose whether to save changes or just preview first, amending and previewing as many times as you need to ensure that your copy is perfect. You can even see if amendments will result in text overflow beyond the bounds of a text frame, thanks to the red outlining feature of design plus. Once saved, the original InDesign file is updated, thereby removing the time-consuming process of going back and forth between reviewers and designers to request and implement text edits.

Files can be viewed by either by page or by spread, allowing the reviewer to see the full context of the document artwork, and navigation backwards and forwards through pages and spreads is simple.

design plus supports on-the-fly conversions too: INDD and IDML documents can be exported to numerous other formats including PDF, SWF, XFL, XML and many more. So you can even use design plus to simply view the contents of an INDD file if you don’t have InDesign, or to save and export the file into a format more suitable for your work – for example, to export an InDesign CC document to IDML so that you or a colleague can open it in an older version of InDesign.

design plus is an integrated component of i plus, our cloud-based language management system, which provides additional functionality such as a centralised library of documents, encrypted file transmission, customised user permissions and reporting, all in one easy-to-use platform.

Benefits of design plus

- No need to buy expensive InDesign licences to edit text.
- Cloud-based: design plus can be used from anywhere.
- Users don’t need any knowledge or experience of InDesign.
- Assign multiple users with varying levels of access and full encryption.
- Export files to multiple formats for ease of use.
